

Catálogo de Aplicações de Correias Automotivas

Veículos Nacionais e Importados

Apresentação

Dia a dia busca-se o aperfeiçoamento do automóvel. São desenvolvidos novos motores mais potentes, leves, econômicos, menores e de maior durabilidade, adequados às necessidades dos consumidores.

Um motor de dimensões menores e com maior potência exige peças compatíveis com suas características. É pensando nisso que a **Continental**, líder mundial em tecnologia de correias, está constantemente em busca de produtos mais avançados, duráveis e seguros.

As **Correias Automotivas Continental** são utilizadas pelos maiores fabricantes de veículos do mundo, sendo projetadas de acordo com as normas técnicas internacionais mais exigentes e produzidas com matérias-primas da mais alta qualidade.

São mais flexíveis, com maior área de contato com as polias, maior tração, menor alongamento, resistentes a óleos, graxas, calor e poeira; proporcionam maior rendimento ao motor, principalmente nas partidas e nas altas rotações.

Neste catálogo, você vai encontrar informações detalhadas sobre os tipos de **Correias Automotivas**, **Aplicações por Veículo**, **Aplicações por Correia**, **Guia de Solução de Problemas** e **Tabelas de Conversão**.

Ao adquirir uma **Correia Automotiva Continental**, você estará recebendo um produto com certificações, o que confirma a excelência do padrão **Continental** de qualidade.

Características Básicas

Correias Automotivas em “V”

- 1. Dentes Moldados** - Proporcionam maior flexibilidade, maior área de contato com as polias, maior tração na transmissão de HP, dissipam melhor o calor, trabalham com polias menores, transmissões mais compactas e silenciosas.
- 2. Construção “Cut-Edge” (bordas cortadas)** - De acordo com normas técnicas mundiais, proporciona maior aderência da correia à polia.
- 3. Cordonéis de Poliéster** - Alta resistência, menor alongamento, garantem a transmissão integral de potência.
- 4. Elemento Têxtil** - Tecido impregnado com borracha especial para oferecer a máxima resistência contra abrasão.
- 5. Elemento Isolante** - Composto especial de Neoprene, que mantém os cordonéis ligados ao corpo da correia e evita o escorregamento entre os componentes.

Nomenclatura	Correia	Largura	Comprimento
	10 x 0950	9,78 mm	950 mm

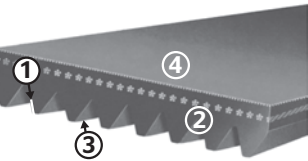

Correias Automotivas “Torque-Team” (duplas)

Torque-Team é uma correia tipo “V” ligada, especialmente projetada para lidar com aquelas difíceis e problemáticas transmissões em que vibrações, cargas de choque ou desalinhamento causam o “turn-over” (a correia vira na polia). Problemas dessa ordem não são incomuns no caso de longas distâncias entre os centros de polias e/ou também cargas pulsantes, criadas por motores de combustão interna, bombas, compressores ou componentes de motores.

Nomenclatura	Correia	Numero de Correias	Largura	Comprimento
	2 X 13 X 1375	2	29,97 mm	1375 mm

Correias Automotivas Poly-V

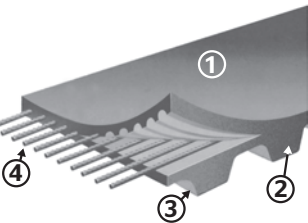

Design de alta eficiência para transmitir potência em espaços limitados a altas velocidades, um produto deve ter encaixe perfeito e contínuo com os canais das polias. Para atender a esses requisitos, as Correias Poly-V apresentam perfil mais baixo e grande área de contato com as polias, permitindo melhor aproveitamento do espaço disponível.

- 1. Coronéis de Poliéster** - Garantem a transmissão integral da potência, alta resistência, com baixo alongamento.
- 2. Elemento de Compressão** - Composto Neoprene, resistente à óleos, calor, poeira e abrasão.
- 3. “Ribs”** - Dente longitudinal com ranhuras diagonais, responsáveis pela transmissão integral da força.
- 4. Top da Correia** - Tecido impregnado com composto Neoprene, resistente à óleos, alor, poeira e abrasão.

Nomenclatura	Correia	Numero de Ribs	Perfil Automotivo	Comprimento
	8 PK 1420	2	PK	1420 mm

Correias Automotivas Sincronizadoras

(Positive Drive - Para Comando de Válvulas)
Em todos os motores a explosão existe a necessidade de sincronizar o movimento do girabrequim com o eixo de comando de válvulas, para que se torne possível seu funcionamento.

- 1. Resistente ao óleo e ao ozônio.**
- 2. Dentes moldados com precisão.**
- 3. Tecido resistente à abrasão.**
- 4. Cordonéis de fibra de vidro extrafortes e dimensionalmente estáveis.**

Nomenclatura	Correia	Nº de Dentes	Perfil do Dente	Largura	Composto de Borracha
	131RH8PN170 HNBR	131	RH8PN	17 mm	HNBR

Guia de Solução de Problemas

Problemas	Causas Prováveis	Soluções
	Polias gastas.	Substituir as polias.
	Óleo ou graxa na correia.	Evite pulverizar o motor com óleos ou querosene. Limpar as polias e correias. Verificar por onde a correia está sendo atingida por óleo ou graxa. Evite.
	Desgaste excessivo ou estrias causadas pelo roçar em cortes ou obstrução.	Retirar a obstrução e realinhar as polias.
Curta duração das correias.	Queimaduras pelo patinar da correia na polia motora.	Tensionar a correia convenientemente.
Correias com quebra prematura.	Correias danificadas na instalação.	Seguir o procedimento de instalação recomendado.
	Desalinhamento de polias e eixos.	Realinhar o sistema.
	Polias gastas.	Trocar as polias.
	Vibração excessiva.	Ajustar a tensão.
Correias que viram no canal da polia.	Correias gastas com rasgos ou estrias.	Substituir a correia.
	Grande carga no arranque ou excessiva sobrecarga.	Ajustar a tensão da correia.
Correia com chiado.	Surgimento de pó na parte lateral da correia.	Limpar.
	Correias frouxas.	Tensioná-las convenientemente.
Vibração excessiva.	Desalinhamento de polias.	Instalar adequadamente. Alinhar polias.
	Correias usadas e novas instaladas no mesmo conjunto.	Nunca instalar correias novas com correias usadas.
Desigualdade das correias durante a instalação ou em serviço.	Eixo das polias desalinhado.	Realinhar a transmissão.
	Polias gastas ou defeituosas.	Trocar as polias.
	Presença de corpo estranho.	Verifique se o guarda-pó está montados corretamente.
	Baixa tensão (corre sobre a borda da polia).	Ajuste na tensão recomendada pelo fabricante do veículo.
Correia quebrada (transversal).	Devido à montagem incorreta.	Montar conforme instruções do fabricante do veículo.
	Correia dobrada ou vincada antes ou durante a instalação (devido a manuseio inadequado).	Evite manusear a correia de qualquer jeito (dobrar, vincar, enrolar, reverter dentes para fora).
Correia quebrada (reto).	Baixa tensão (devido à montagem incorreta).	Ajuste na tensão recomendada pelo fabricante do veículo.
	Polia travada.	Localize e repare a polia travada.
Dentes arrancados.		
	Vazamento de óleo no motor.	Reparar o vazamento de óleo sobre a correia.
Contaminação por óleo.		
	Correia com muita tensão (devido à montagem incorreta).	Ajuste na tensão recomendada pelo fabricante do veículo.
Falha por alta tensão.	Flange da polia danificada.	Coloque uma nova polia.
	Polia desalinhada.	Verifique o alinhamento.
Desgaste nas bordas.	Baixa tensão (devido ao ajuste incorreto).	Ajuste na tensão recomendada pelo fabricante do veículo.
	Tensão de trabalho muito baixa (devido ao ajuste incorreto).	Verifique o funcionamento do tensionador.
Dentes cortados.	Tensão excessiva ou baixa (devido ao ajuste incorreto).	Ajuste na tensão recomendada pelo fabricante do veículo.
	Polia desalinhada ou danificada.	Verifique o alinhamento ou coloque uma nova polia.
Transmissão com ruído.

Informações Técnicas

Os motores de última geração, utilizados nos veículos estão trabalhando com temperaturas cada vez mais altas, devido à utilização de maiores taxas de compressão e a um processo de combustão mais otimizado, resultando em maior potência e temperatura. Para atender às exigências decorrentes desta evolução tecnológicas dos motores, foi desenvolvido o composto de borracha denominado HNBR, para a fabricação de correias sincronizadas.

HNBR é um elastômetro de última geração, resistente à temperaturas geradas pelos novos motores, com alta resistência à fadiga e ao ozônio. Além disso, diminuem significativamente o nível de ruído natural de transmissão.

Material	Resistência à temperatura
Neoprene	Até 110° C
HNBR	Até 150° C

ATENÇÃO	Algumas correias sincronizadas apresentam o mesmo número de dentes, perfil e largura, sendo fabricadas em Neoprene e HNBR. Deve-se aplicar as correias em Neoprene, somente nas aplicações recomendadas pela montadora do veículo.
EXEMPLO	Os automóveis GM Corsa a partir de 1996 e os automóveis VW/Ford com motores AP a partir de 1997, só podem utilizar correias em HNBR, de acordo com a recomendação das respectivas montadoras.

Recomendações Importantes

- 1 As correias sincronizadas não podem ser dobradas (vincadas) sob o risco de danificar os cordoneis da correia que são de fibra de vidro. Devem ser mantidas em sua embalagem original até o momento de sua aplicação.
- 2 A substituição da correia sincronizadora deverá seguir rigorosamente as recomendações do fabricante.
- 3 Correias sincronizadas usadas, NÃO podem ser reutilizadas.

Dúvidas Frequentes

	Pergunta	Resposta
1	Qual é a garantia que a Continental oferece?	A Continental garante seus produtos em caso de anomalia dos materiais e/ou mão de obra empregada. O produto que apresentar falha deverá ser encaminhado à Continental para análise. Constatando-se qualquer anomalia, a Continental substituirá o produto conforme práticas de fornecimento usual. A mencionada garantia não se aplica em casos de má utilização/ aplicação do produto.
2	Qual a quilometragem prevista para a troca da correia?	A substituição da correia deverá obedecer o manual de manutenção do veículo. Checagens do sistema de transmissão devem ser realizadas a cada 15.000km ou menos para aplicações severas. Obs: são consideradas aplicações severas: trânsito em trechos com alto índice de congestionamento, trânsito em estradas de terra e cidades litorâneas.
3	Como as correias devem ser estocadas? Por quanto tempo e em que condições?	As correias devem ser mantidas nas embalagens originais. Devem ser estocadas por no máximo cinco anos, em local seco e arejado, sem a presença direta da luz do sol.
4	Por quanto tempo as correias podem ficar instaladas no veículo, caso não tenha sido atingida a quilometragem de troca?	Por no máximo três anos, devendo ser realizadas verificações periódicas do sistema de transmissão.
5	Qual a diferença entre a correia com borracha HNBR para a correia convencional (com borracha de cloroprene)?	Basicamente a diferença está na temperatura de trabalho encontrada no compartimento do motor. Motores mais antigos utilizam correias em cloroprene devido sua menor exigência de transmissão de potência. Para não ficar com dúvidas, consulte o manual de manutenção do veículo ou o catálogo de aplicação de correias automotivas.
6	Por que minha correia faz ruído?	O ruído proveniente da transmissão pode ser por diversos fatores, dentre eles: tensão inadequada (acima ou abaixo do indicado para montagem/ trabalho, desalinhamento de polias ou interferência de objetos estranho à transmissão.
7	Por que minha correia está desgastando na lateral?	O desgaste da correia pode ser causado por desalinhamento de polias, ou tensionadores e polias danificadas.
8	A correia do Gol1.0 16V Turbo é a mesma do Gol inspirado?	Sim, ambos motores utilizaram a mesma correia para o comandante de válvulas.
9	Posso aplicar novamente correias sincronizadas que já foram utilizadas?	Não. A Continental não recomenda a recolocação de uma correia sincronizadora que tenha sido utilizada, pois ocorrerá um sobre-tensionamento que prejudicará o perfeito sincronismo entre polias e correia, causando a falha desta.
10	Qual a diferença entre o perfil H8P e S8M?	Cada veículo tem a sua correia definida pelo fabricante. Embora os dois perfis tenham passo de 8 [mm], a diferença pode ser visualizada nos desenhos. Para não ficar com dúvidas, consulte o manual de manutenção do veículo ou o catálogo de aplicação de correias automotivas.
11	Qual é a tensão adequada para cada correia?	A correia deveser tensionada de acordo com a recomendação do fabricante do veículo/ manual de manutenção do veículo.
12	Por que as correias Poly-V Elite possuem ranhuras diagonais?	As correias Poly-V Elite são patente Continental para melhorar durabilidade e desempenho. Isto é possível, pois as Correias Elite são mais flexíveis, permitindo melhor abraçamento com as polias, maior troca de calor em trabalho e menores níveis de ruído.
13	Como verifico a data de fabricação da correia?	A data de fabricação pode ser observada junto a identificação da correia como mês e ano de produção. Neste exemplo temos: (0508-Maio de 2008).
14	Qual sentido correto de instalação da correia?	Obedecer o sentido de montagem indicado na marcação do produto. Nos casos em que não há indicação do sentido de montagem, este não é exigido. Por costume, monta-se a correia com a marcação voltada para si.
15	Por que não se deve vincar uma correia sincronizadora?	As correias sincronizadoras são produzidas com cordonéis de fibra de vidro, e se forem dobradas em forma de vinco, os cordonéis poderão se partir, o que acarretaria na falha da mesma. Isso pode acontecer por armazenagem incorreta, bem como durante a instalação da correia.

ContiTech. Engenharia em alto nível.

Uma divisão do Grupo Continental, a ContiTech é sinônimo de inovação e liderança em borracha natural e plásticos. Somos parceiros da indústria e enxergamos o futuro à nossa frente, nossos engenheiros desenvolvem soluções com e para os nossos clientes em todo o mundo. Essas soluções sob medida são criadas para atender as necessidades do mercado. Com grande experiência em materiais e processos, somos capazes de desenvolver tecnologias de ponta, com utilização responsável dos recursos. Somos rápidos para responder às tendências tecnológicas mais importantes, como a integração de funções, engenharia leve e redução da complexidade, e oferecer uma gama de produtos e serviços relevantes. Dessa forma, quando você precisar de nós, você vai encontrar, pois já estamos lá.
